

Transmittal Management

Create, Send & Track
Transmittals Seamlessly

Typical business challenges in Transmittal Management

- Lack of secure and centralized file management
- Off-track in tracking transmittal progression
- Inefficiency in handling high volume of documents
- Inability in managing transmittal lifecycle
- Lack of information and follow-up
- Accessing disparate legacy systems

Standardize & secure the entire transmittal lifecycle with CCS

- Enhance the collaboration between project stakeholders
- Reduce risks with improved transparency & monitoring
- Increase visibility for reporting and auditing purposes
- Drive efficiency & lower liability risks
- Improve transmittal traceability

Global and large-scale projects in Manufacturing, Construction, and Engineering often require large number of documents to be exchanged between internal and external stakeholders. Transmittal management solutions help project stakeholders share documents/drawings, calculations, specifications with all parties involved for the necessary approvals, reviews or reference.

Why rely on CCS Transmittal Solution for large-scale projects?

CCS designed and developed a Transmittal Management Solution using SharePoint Online (Microsoft 365 suite) that enables organizations to send and receive transmittals in a standardized and secure way. It facilitates the easy transfer of vital business documents, files, blueprints, datasheets, and logs to business partners and obtains documented proof of the receipt. With CCS, you can streamline and audit your transmittal exchange in a secure fashion. Transmittal Management Solution ensures the cost-efficient and smooth running of projects.

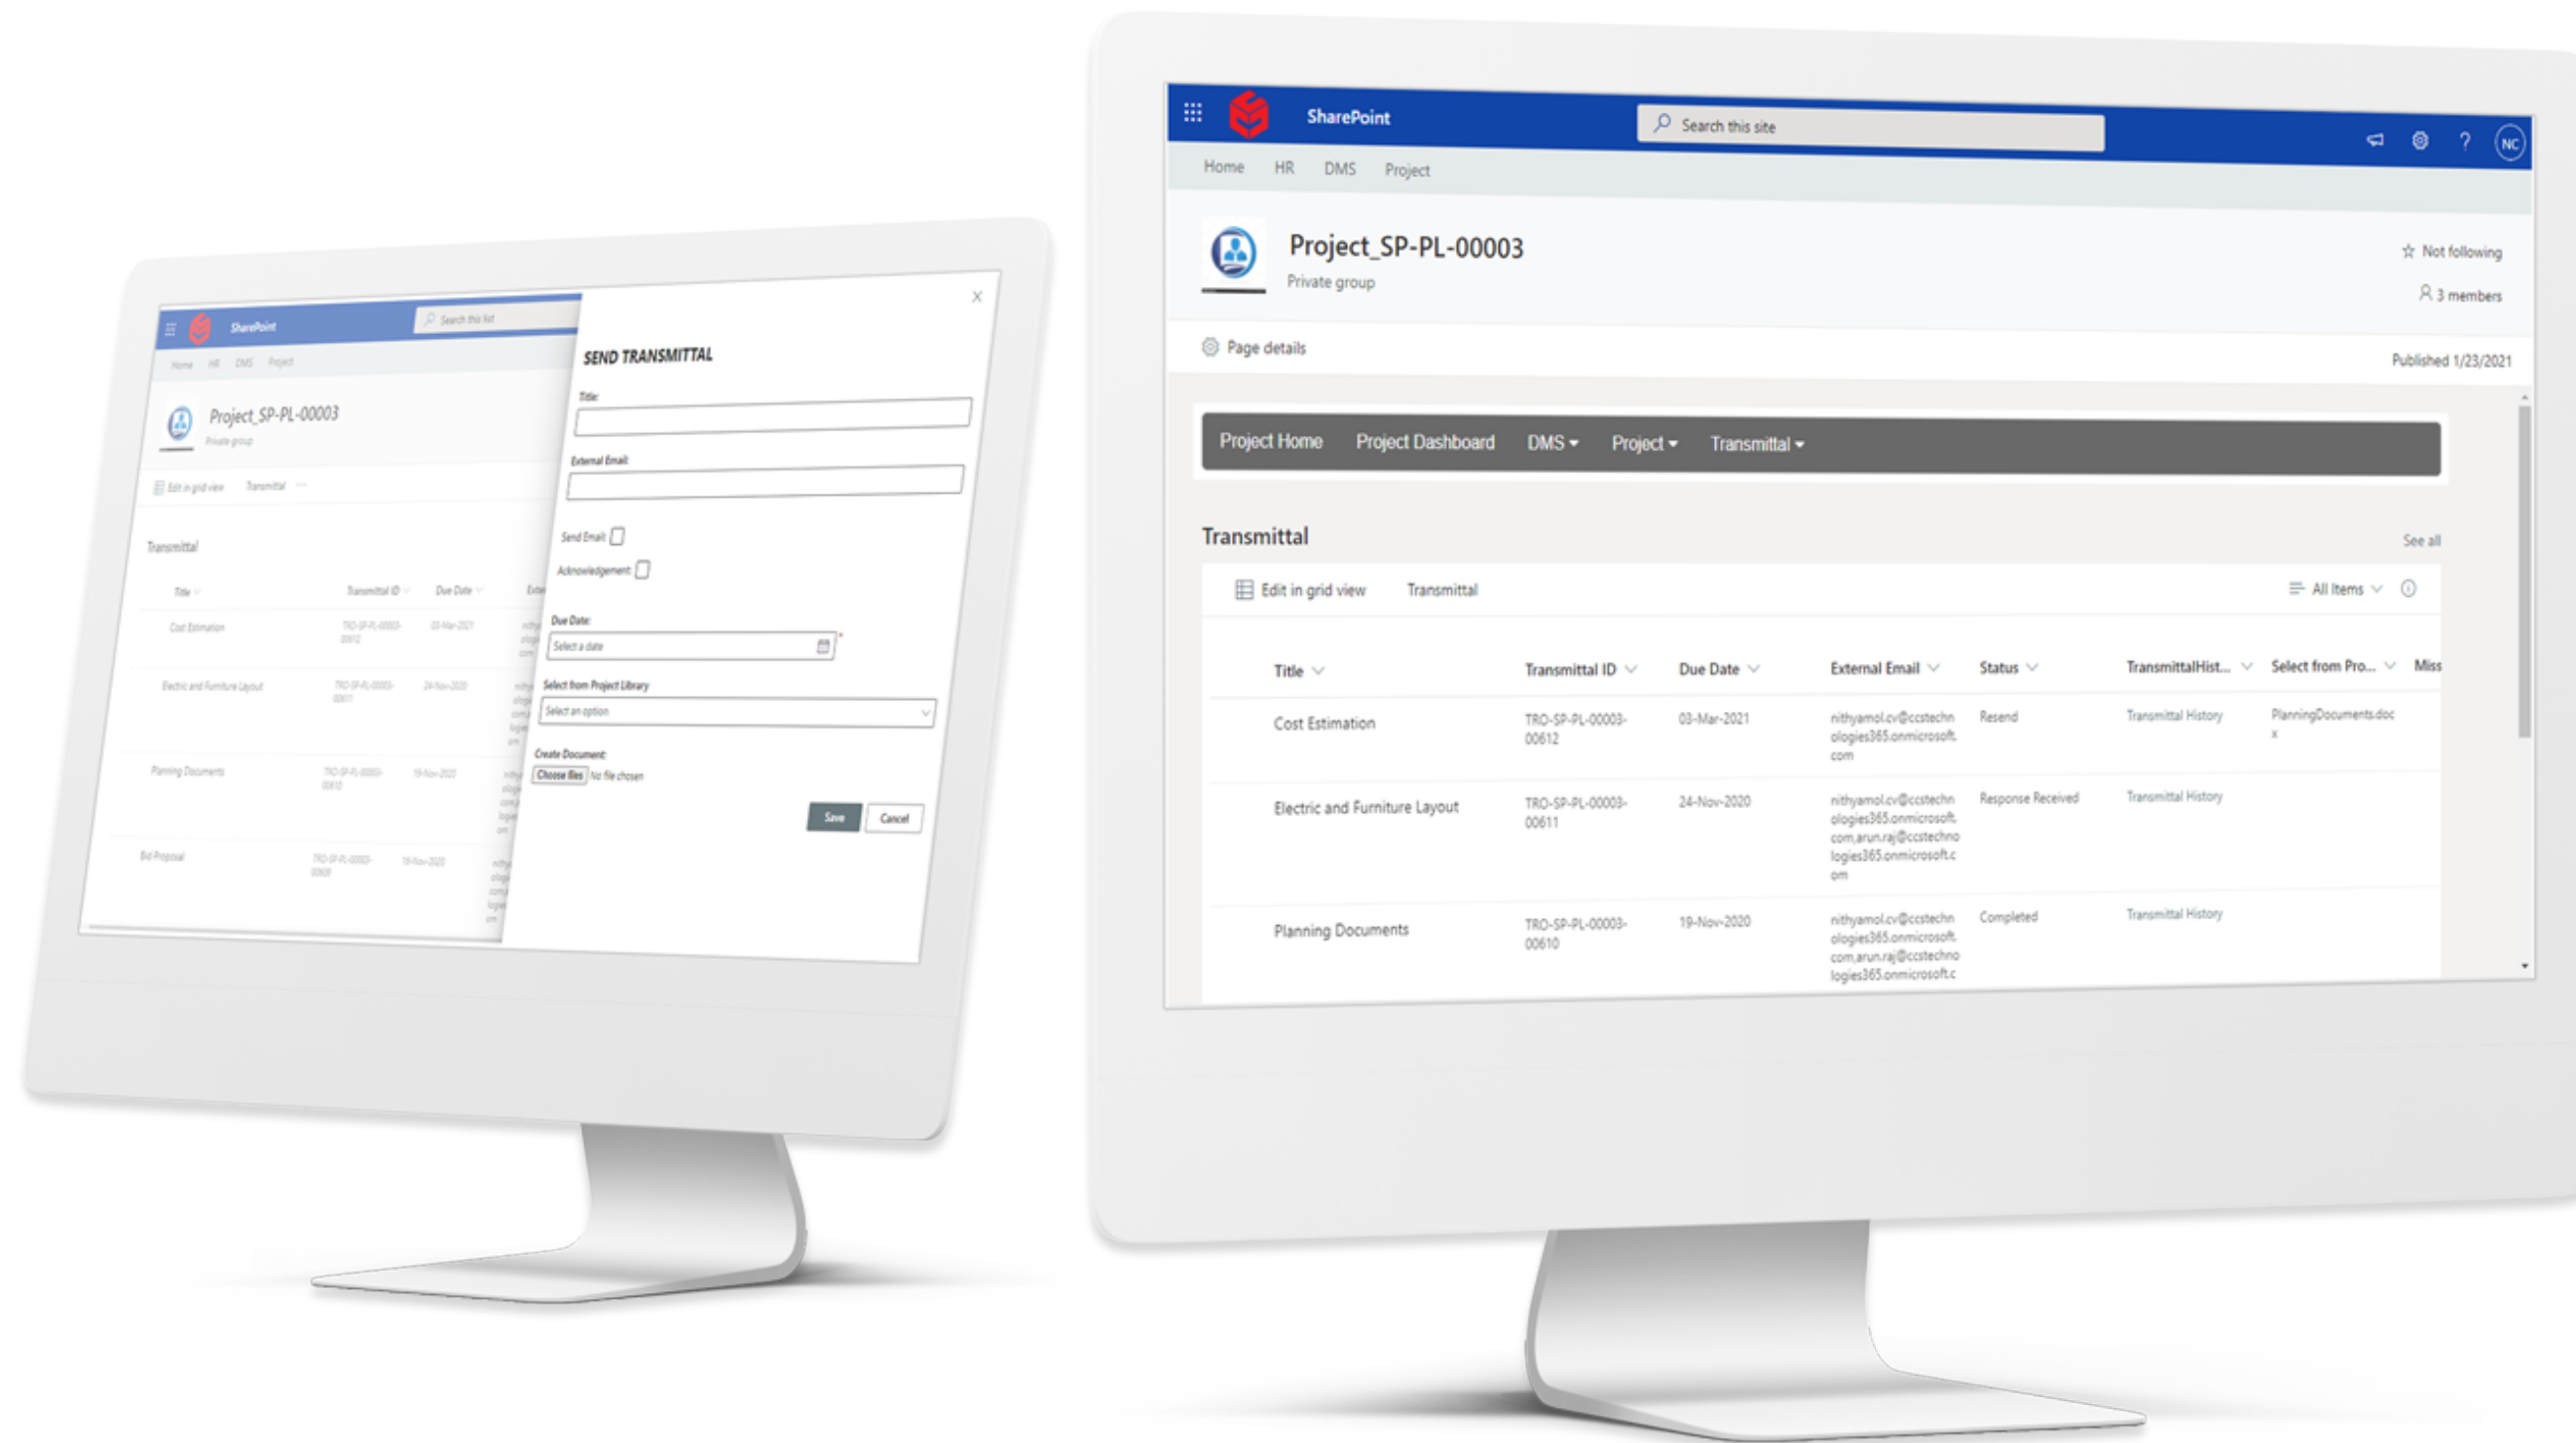

Benefits of CCS Transmittal Solution

- Improved project management & collaboration
- Overcome data loss and improve compliance
- Increased efficiency & file management
- Improve document accessibility
- Reduced storage space
- Track all changes

Simple, secure, standardized creation & transfer of Transmittals with CCS

+
